

**CoSoSys appointments MicroRiver as Agent & Distributor for the UK  
CoSoSys Award-Winning Software Allows for Password protection, E-mail and Contacts  
Synchronisation between PCs.**

**MicroRiver will bundle CoSosys's Carry it Easy +Plus Software on it's Biometric mini secure USB  
Flash Pen Drives.**

MicroRiver a leading UK supplier of flash media solutions for the security conscious market, announces today that it will sell & market the whole range of CoSoSys software.

1. The award winning Carry it Easy +Plus software will be bundled on the new MICRORIVER biometric Mini secure USB flash Drives. The preloaded software will allow Biometric Mini secure users to keep Outlook E-mail and Contacts synchronised and portable between PCs. Users will also be able to carry their personal Internet Favourites with them.
2. A password only version (non-biometric) of the software will be sold separately for standard USB flash drives. This gives them a basic level of protection, whilst improving their functionality.
3. Whilst, Secure it Easy, USB Firewall software is available which manages the general usage of USB storage devices on the Corporate network.

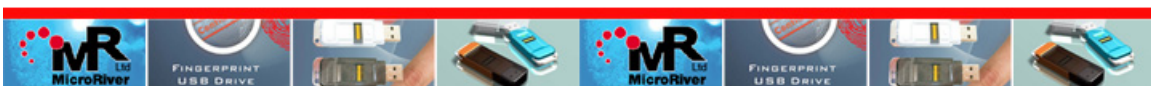

“We are delighted with this appointment, for it compliments our business perfectly, whilst providing us with a massive retro fit opportunity to upgrade the installed base of USB flash drives,” said Gerry Toms MicroRiver’s Sales & Marketing Director.

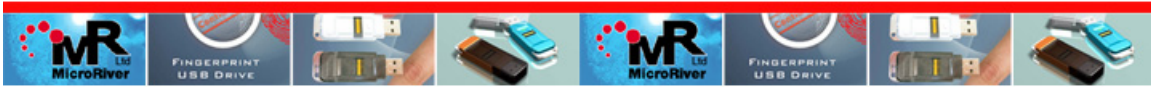

“As with all other MICRORIVER flash memory products, the new Mini secure biometric USB flash drive offers protection from water/moisture, dust, static discharge, and extreme temperatures and is the perfect tool to carry important data, especially when it comes to confidential work documents, due to its compact, robust design. However, it is even more crucial to have data always be updated and be immediately available anytime you need it,” said Majid Ali, MicroRiver’s Managing Director. “With Carry it Easy +Plus software allowing for data synchronisation, important work information such as Outlook E-mail and Contacts has now become dynamic. This is a significant advantage especially for business professionals who travel constantly and therefore cannot afford having scattered data.”

“The Mini Secure biometric drive together with our award winning Carry it Easy +Plus software give users a great combination of hard and software. Keeping their data safe and in sync while on the road.” said Roman Foeckl, Managing Director of CoSoSys.

“ In the past we have been very successful selling our software bundled with USB flash drives, however, MicroRiver gives us an opportunity to sell our software on its own to upgrade the huge installed base of normal USB flash drives” comment Cristina Pop, CoSoSys, Sales Director.

In addition to the freedom of having Outlook E-mails and Contacts portable, Carry it Easy +Plus also offers File, Folder and Desktop synchronisation features that allow users to keep their work files on different PCs always up-to-date. The included compression functionality adds extra capacity to the USB Drive, allowing more data to be stored in compressed form. Most importantly the Carry it Easy +Plus software adds security to the Mini secure drives by password protecting and partitioning the USB Drive.

### **About MicroRiver**

Founded in 2003 with its UK office in Maidenhead, Berkshire, MicroRiver is a premier supplier of high performance hardware and software aimed at the Security Conscious market. For more information on MICRORIVER products & services visit <http://www.MicroRiver.com>.
