

Intelligent Authentication from MicroRiver

UK based Security Solution provider MicroRiver today announced the UK availability of Delfigo's flagship product DSGateway™. [DSGateway](#) provides a secure platform for companies to implement intelligent authentication for identity and access management using 14 identity factors including keyboard biometrics, system parameters, and geospatial parameters. Delfigo's combination of biometrics with other factors significantly reduces data loss by preventing unauthorized system access at the point of entry.

DSGateway is a true zero-footprint solution that helps organizations reduce costs, while providing unmatched confidence in the identity of each user. Built from the ground up to meet the complexities and demands of today's businesses, Delfigo's solution is easily deployed, configured and managed. As the industry's only solution that is offered as a web-service or behind the firewall, DSGateway easily integrates with existing technologies and back-end systems.

DSGateway enables organizations to configure "tolerance levels" to match their internal risk mitigation strategies and policies. The unique use of the Confidence Factor (CF) allows organizations to be more flexible and not locked into an all-in, all-out approach to authentication. Delfigo also offers single sign-on (SSO) capabilities through partnerships with other solutions providers, making it easy for enterprise users to quickly and securely access any application in their network.

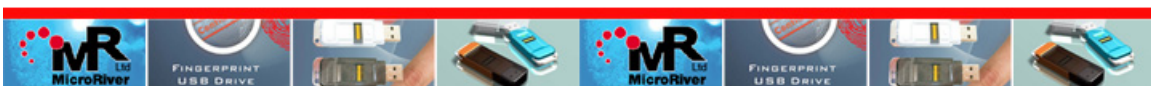

Majid Ali Sales Director MicroRiver commented, "Inline with our other endpoint security products, DSGateway is the way forward to address online fraud and a cost effective multi-factor authentication solution."

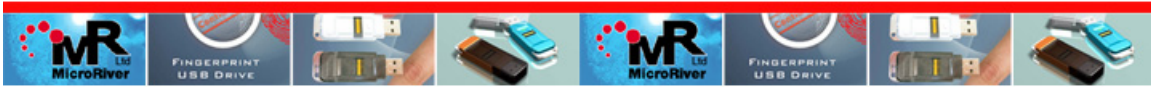

"The open sourced architecture of DSGateway and the complementary nature of solutions makes the partnership between MicroRiver and Delfigo ideal for customers needing complete security solutions to protect their digital assets and users needing access to them", said Mr. Bharat Nair, VP of Business Development at Delfigo Security.

About MicroRiver

MicroRiver UK based manufacturer and solution provider for Data Loss Prevention. Its product portfolio offers years of consultation and research to address security threats from within and making sure you always are one step a head.

MicroRiver have worked with a number of high profile UK customers including the UK Police, providing solutions for the ever growing concerns of data security.

About Delfigo

Delfigo Security is the pioneer in intelligent authentication solutions. The company's patent-pending AI based DSGateway™ security platform is uniquely positioned to answer the questions, "Are you who you say you are," when a user accesses a system. Using multiple identity factors including keystroke dynamics, geospatial location and system parameters, Delfigo evaluates each user to assign a Confidence Factor and transparently provides the appropriate level of system access. Organizations that use Delfigo know each users is validated but not unduly burdened by the system with long validation procedures or false negatives preventing access.

Built on a true zero-footprint cloud architecture, DSGateway provides unmatched manageability and ease of installation, lowering total cost of ownership (TCO). Organizations rely on Delfigo Security to reduce fraud, meet compliance demands, or provide tiered access to member services. Delfigo's premier authentication platform validates the user, not the machine. For more information please visit www.delfigosecurity.com or visit our blog at www.delfigosecurity.com/iamblog/.
